

Instrument Cable

The FEUR Tour Pro cables are engineered for demanding musicians and the most challenging environments. FEUR Tour Pro offers a premium line of instrument, speaker, and microphone cables designed for exceptional durability and sound fidelity. Unlike standard cables that can color your tone or diminish its harmonic richness, FEUR Tour Pro cables preserve every subtlety of your performance. Built with cutting-edge cable technology, the FEUR Tour Pro series features oxygen-free copper twisted-pair conductors surrounded by a dual polyethylene layer and an ultra-effective shield. This construction ensures extremely low capacitance, allowing the clarity, brightness, and unique voice of your instrument to shine through without compromise. The PE shielding provides excellent resistance to moisture and weather, making it ideal for outdoor use. To further guarantee reliability, each cable includes sealed solder joints and a rugged molded strain relief, ensuring maximum performance even in the toughest conditions. Your cable should never interfere with your sound — FEUR makes sure it doesn't.

FEATURES:

- Low capacitance for pure signal transparency.
- 24-karat gold-plated connectors provide superior signal flow and corrosion resistance.
- Braided copper shielding reduces electromagnetic interference.
- Dual-layer PE shielding ensures noise rejection for silent operation.
- Excellent moisture and weather resistance properties for outdoor use.
- Low dielectric constant — ideal for high-frequency signals.
- Oxygen-free copper conductors.
- 6.35 mm (1/4 inch) TRS male to XLR female unbalanced cable
